

## **The SmartFix® concept – Smart and predictable oral rehabilitation with tilted implants**

Patients as well as dentist expect implant treatment to be simple and predictable. But quite often, lack of bone height requires additional measures in order to place implants. Advanced surgery to, increase the bone volume, is a drawback for many patients. Alternative, the implants can be tilted to avoid critical structures and be completely surrounded by the residual bone. While the original all-on-four protocol held many prosthetic disadvantages, the SmartFix® concept has improved and simplified the treatment concept. In this workshop, participants will be guided step-by-step through the surgical and prosthetic protocol of the SmartFix® concept.
